

Surprise study analysis

Marjan Biria

2024-08-19

Study description

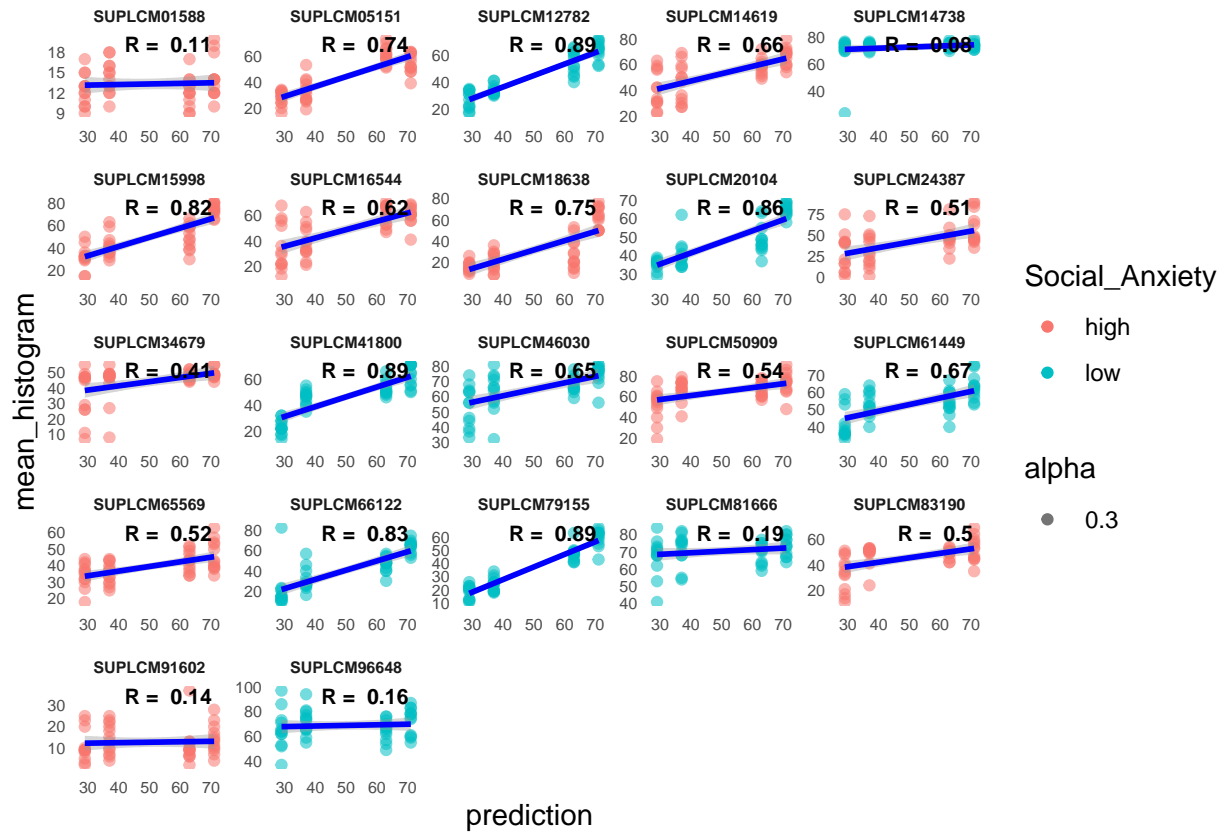

This is the first surprise study using the same task version as pilot 21. We had the following groups of participants with the experiment's corresponding Gorilla link: - Prolific aged 18-25 (n = 30): <https://app.gorilla.sc/admin/experiment/180921/design> - Prolific aged 26-45 (n = 38): <https://app.gorilla.sc/admin/experiment/185160/design> - School students aged 14-18 (n = 30): <https://app.gorilla.sc/admin/experiment/177048/design> - Community participants aged 18-25 (n = 24): <https://app.gorilla.sc/admin/experiment/180348/design>

The sample sizes include participants that potentially need to be excluded.

Relationship between prediction and mean histograms (4x only in the beginning)

[1] "average correlation between mean_hist and prediction: 0.565715129856099"

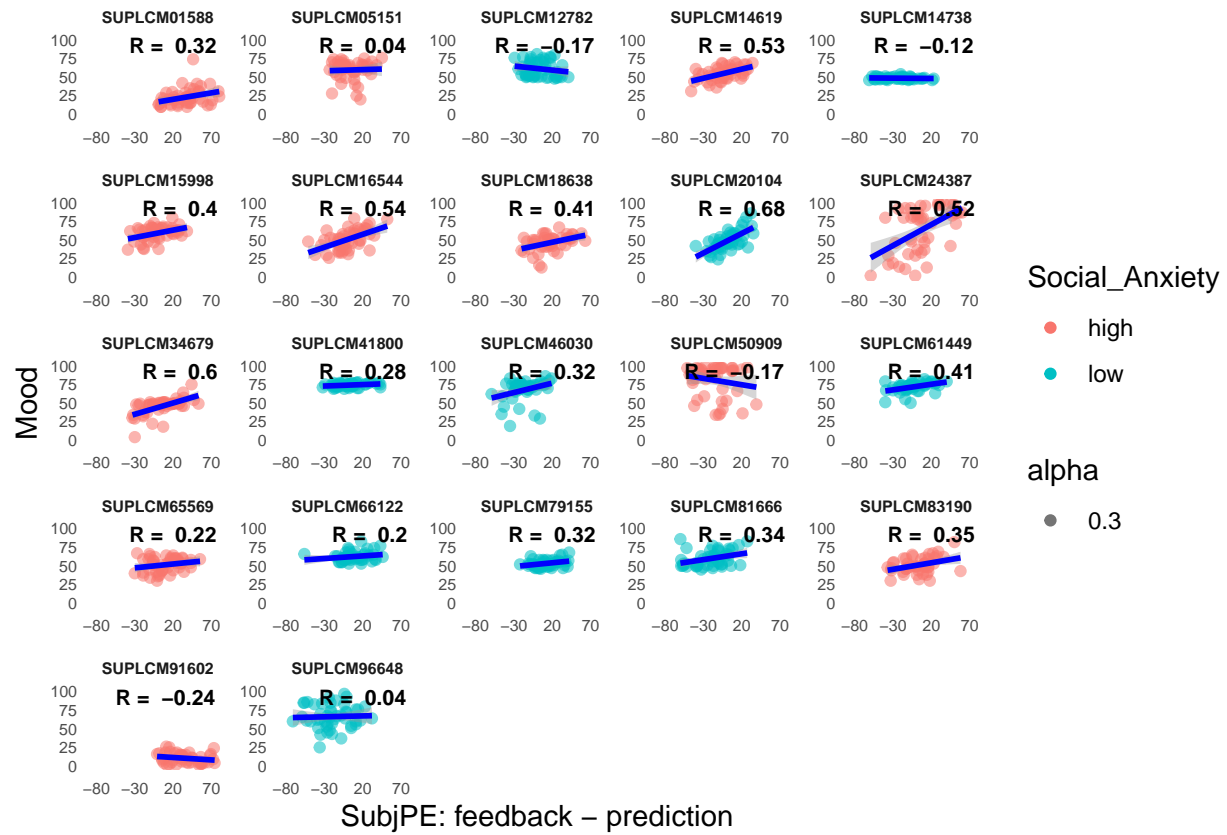

Relationship between Anxiety and SubjPE

[1] "average correlation between anxiety and SubjPE: -0.184111040759904"

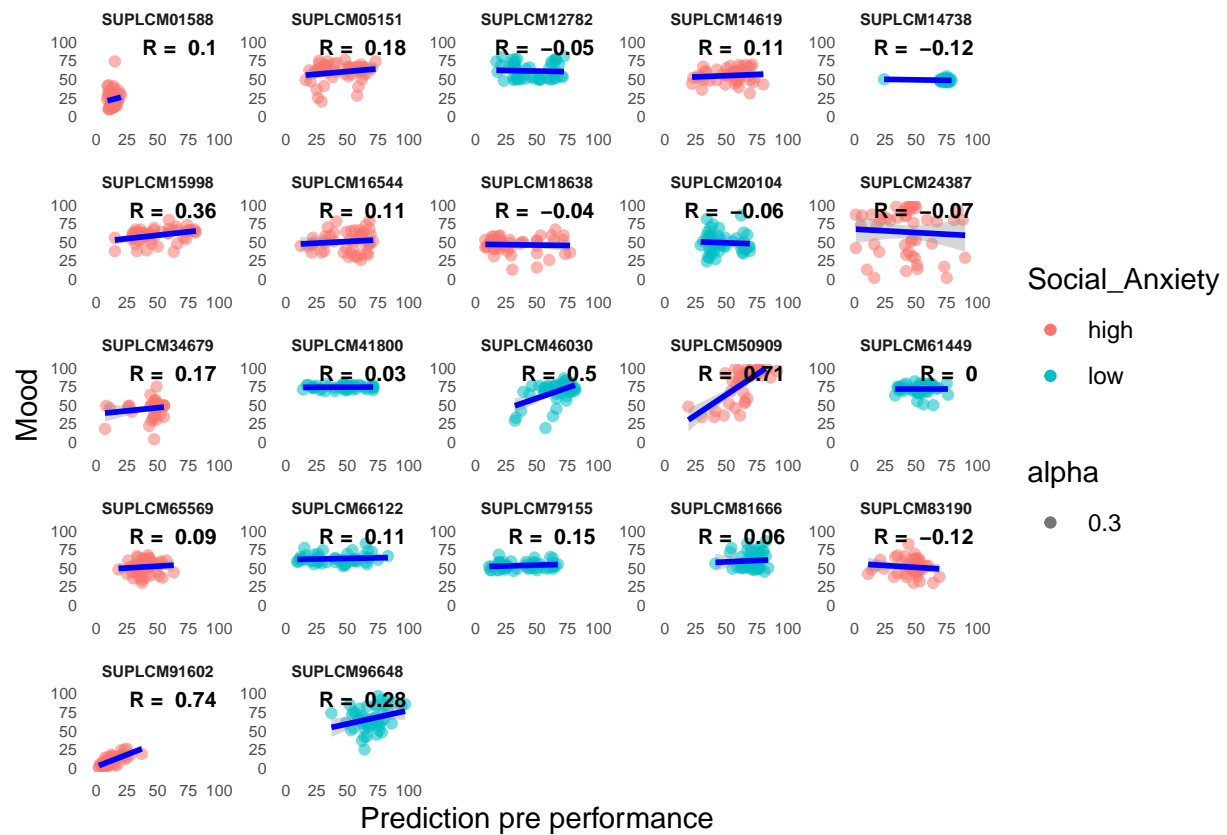

Relationship between Mood and SubjPE

[1] "average correlation between mood and SubjPE: 0.26343108808674"

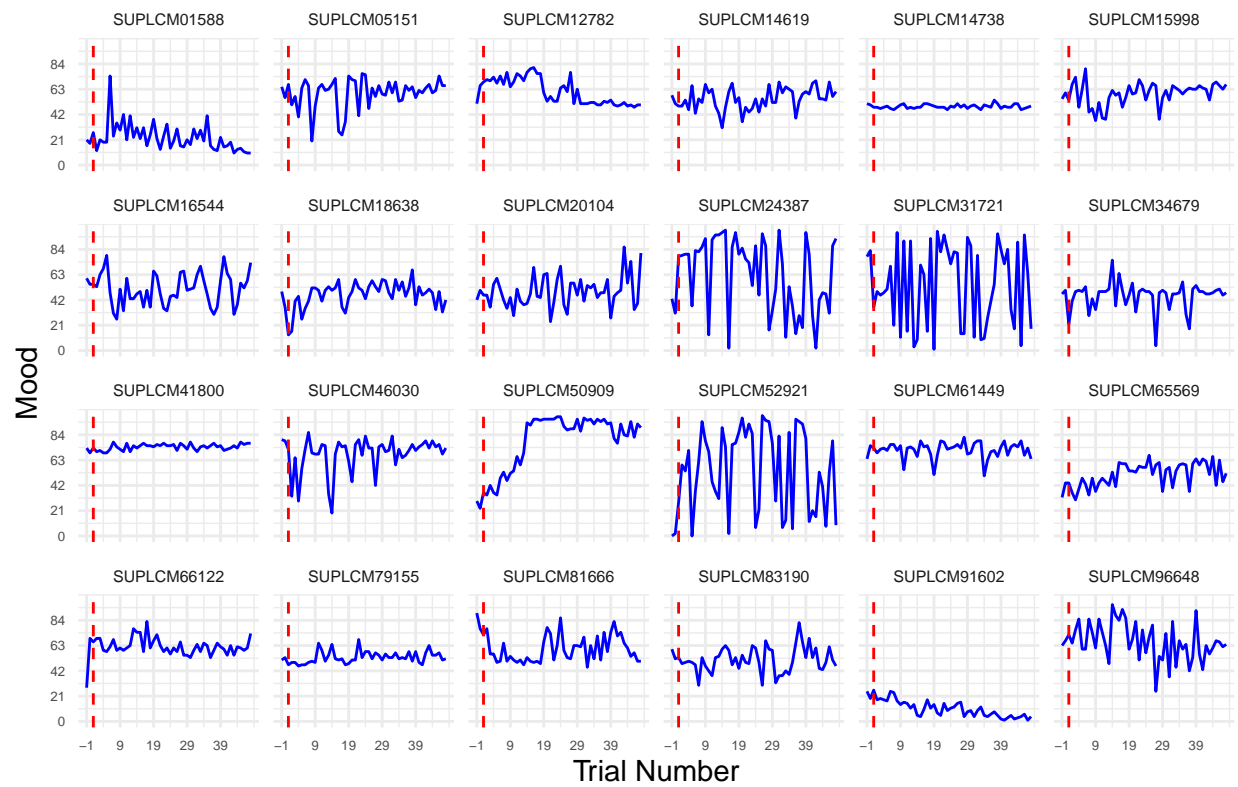

Relationship between Mood and prediction (pre-performance)

[1] "average correlation between mood and prediction before performance: 0.14722601982166"

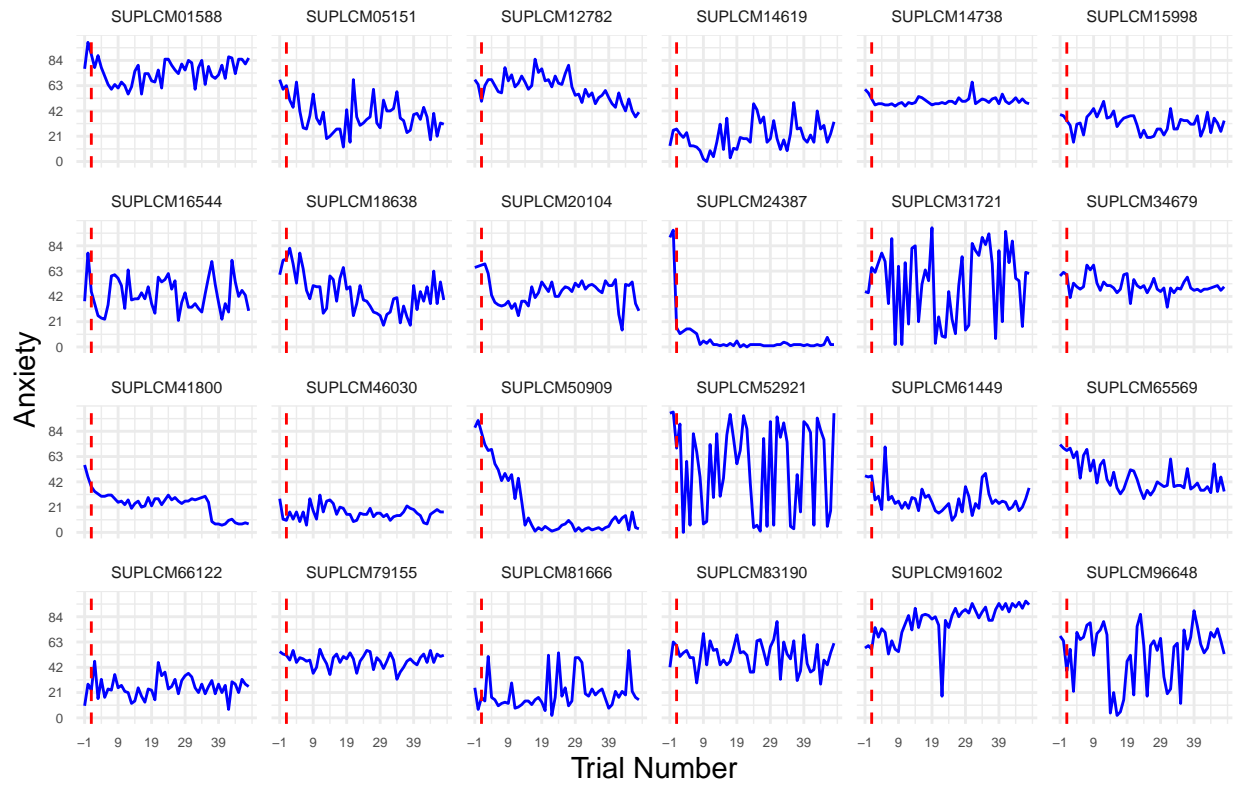

Mood over time

Mood across time

Anxiety over time

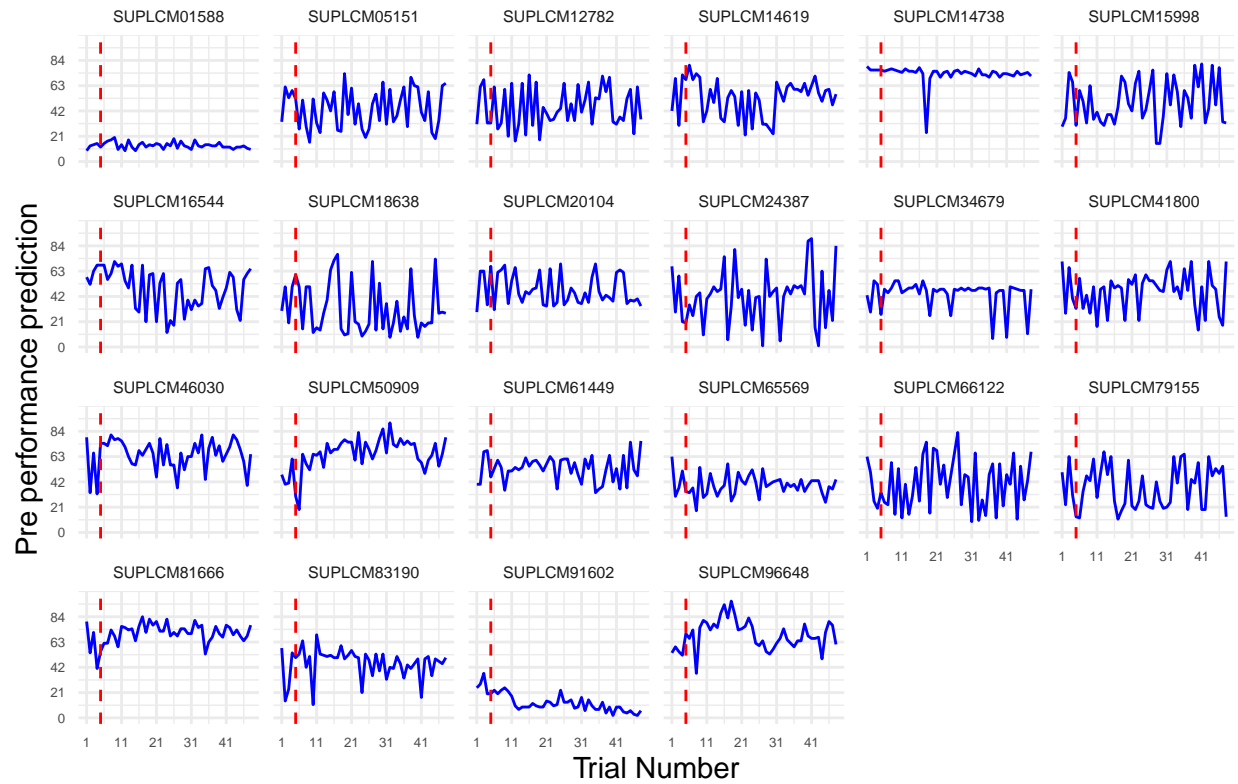

Anxiety across time

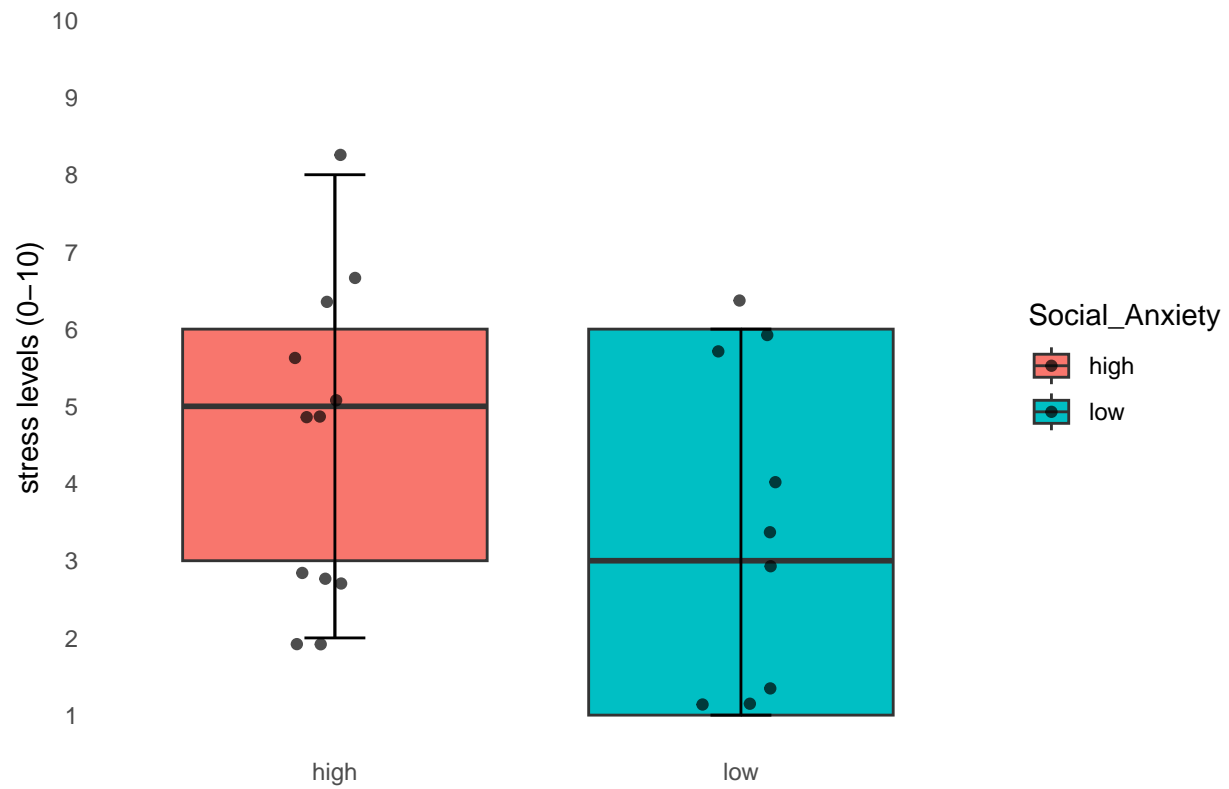

Prediction before performance over time

Red line presents until what points histograms were presented (4 first trials only).

Prediction before performance across time

Stress levels and social anxiety

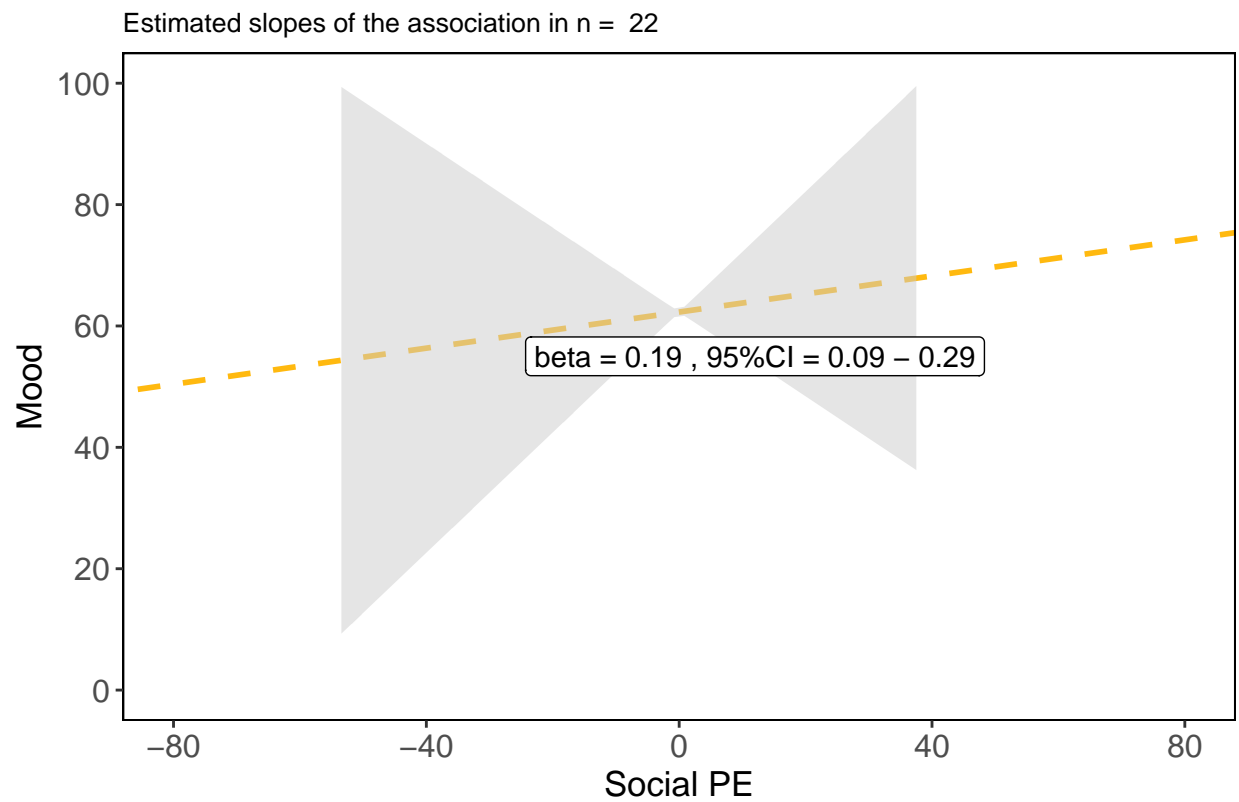

LME models for Mood and SubjPE

The best model seems to be: $\text{Mood} \sim \text{SubjPE} + \text{mini_SPIN_total} + (\text{SubjPE} \mid \text{Random_ID_new})$

[1] 8332.035

[1] 8389.615

[1] 8330.479

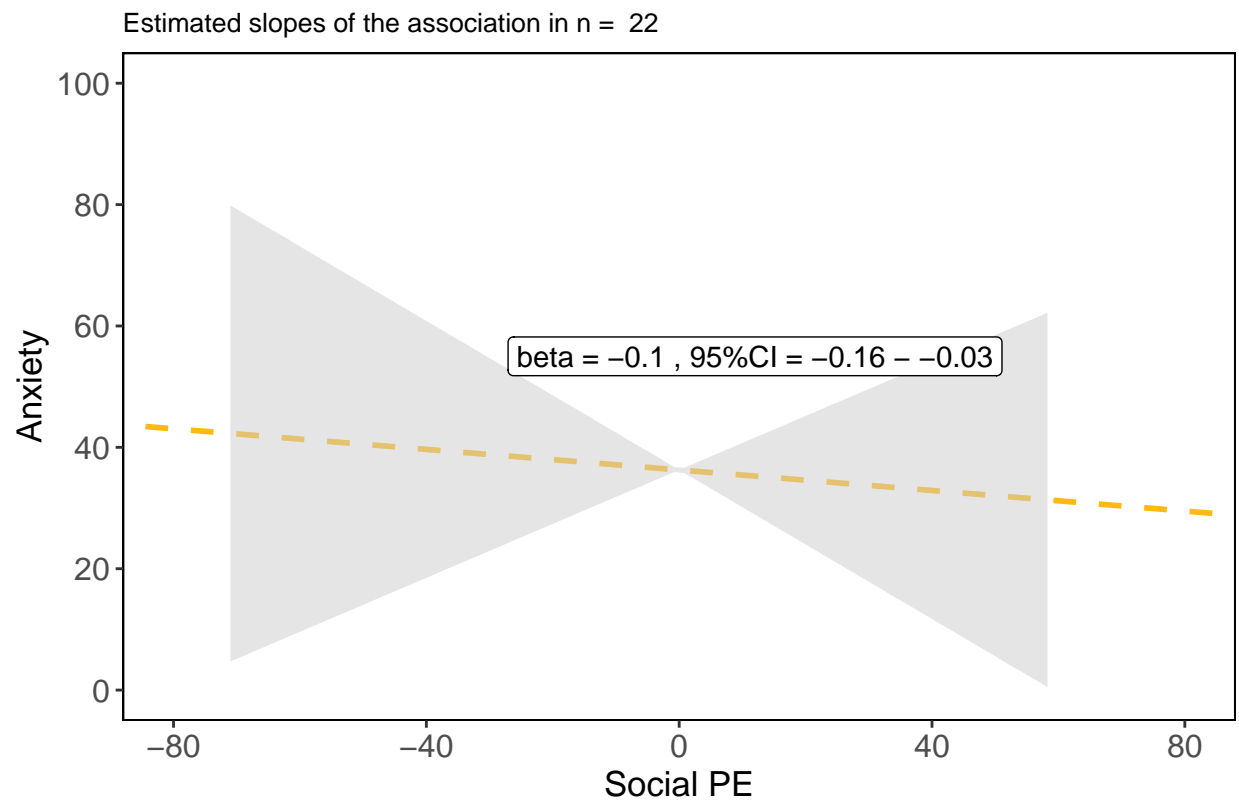

LME models for Anxiety and SubjPE

The best model seems to be: $\text{Anxiety} \sim \text{SubjPE} + \text{mini_SPIN_total} + (\text{SubjPE} \mid \text{Random_ID_new})$

[1] 8359.33

[1] 8370.763

[1] 8358.729

ICC for Mood

```
## # Intraclass Correlation Coefficient
##
##     Adjusted ICC: 0.589
##     Unadjusted ICC: 0.589
```

ICC for Anxiety

```
## # Intraclass Correlation Coefficient
##
##     Adjusted ICC: 0.702
##     Unadjusted ICC: 0.702
```
